Simplified Access Control for Any Door

Using smart innovation to simplify everything from installation to everyday use and management, SMARTair brings complete access control to any door and more of them. As a wire-free solution, SMARTair installs as easily as changing a standard lockset and can be used on any access point. With it, you'll be able to control who can go where and when.

SMARTAIR

Whether you need control of one selected access point or many, SMARTair delivers access control via a wireless network to self-contained locksets. Armed with either HID iClass smart card technology or MIFARE, you'll get the security you expect.

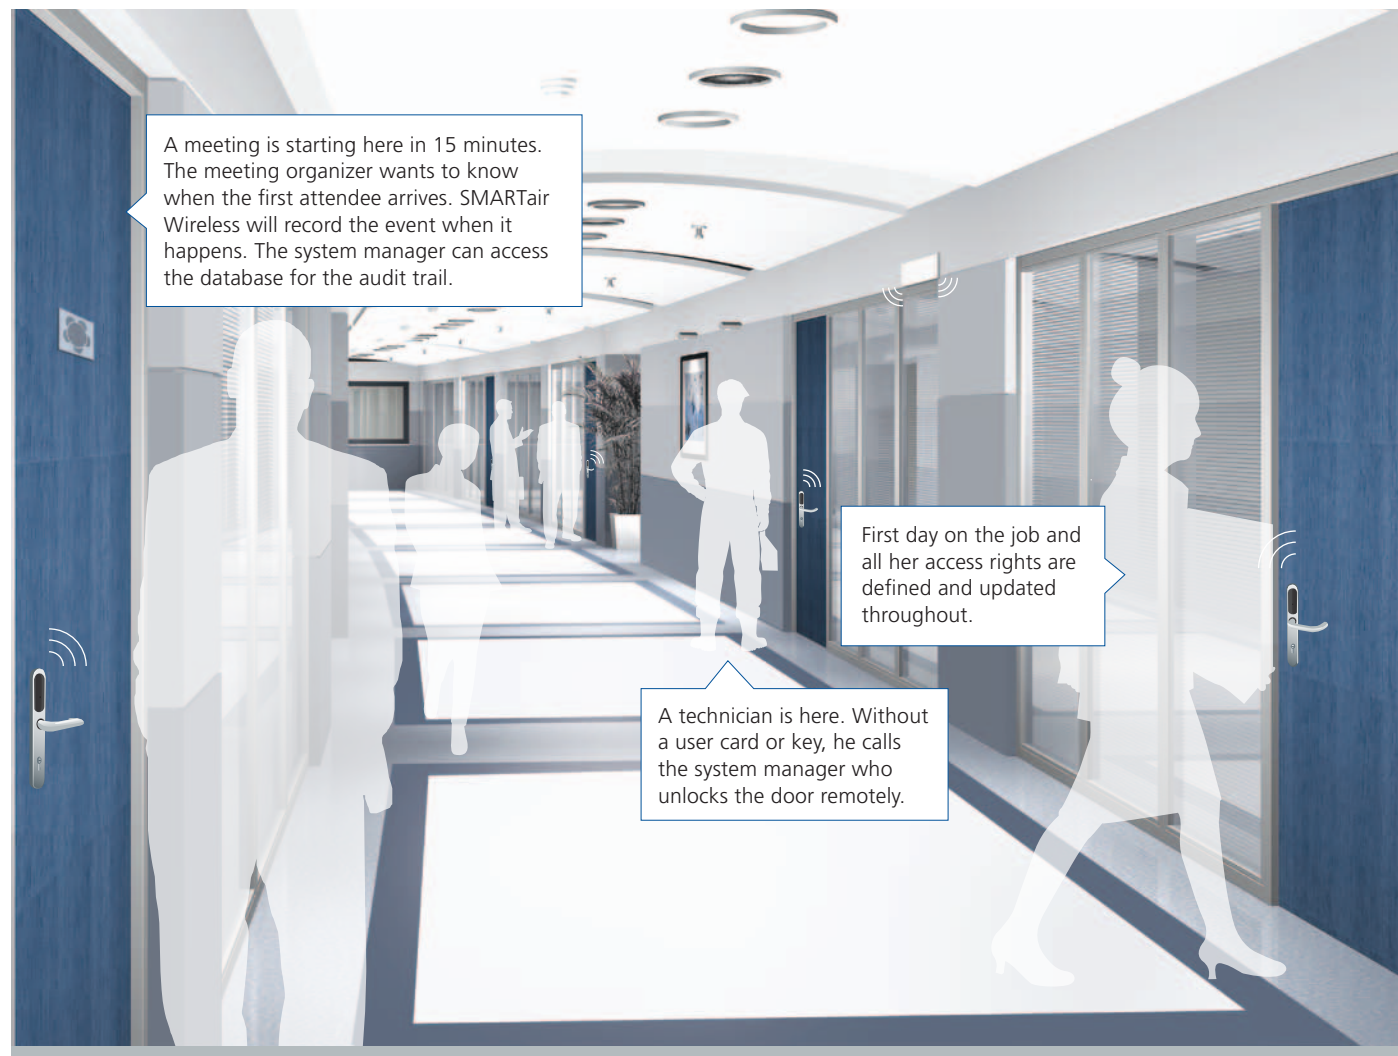

Protect and control any access point

SMARTair was designed for flexibility. With a product range that includes long plate and short plate escutcheons, cabinet locks, readers, knob cylinders and accessories, you have the power to control doors and virtually any access point.

Efficient management for multiple security needs

Controlled directly and remotely from a PC, and with updates sent wirelessly over the network, you can:

- Make changes to scheduling and authorization
- Open distant doors with a few keystrokes
- Issue prompt cancellations or authorizations of users and more

Accountability via audit trails

With SMARTair, you can receive information about events at every connected access point. You will know who went where, when and for how long. You will also be able to get complete audit trails of all activity over any range of time.

Intuitive and easy-to-learn software

Authorized personnel will intuitively master the easy-to-program, easy-to-operate system software in no time.

Options to match your environment

With a wide variety of credentials — cards, FOBs, disposable bracelets and silicon wristbands — you have the flexibility to design the system that works best for your environment. And as a scalable system, the solution will grow with you.

Sleek, smart simplicity

SMARTair's sleek design allows you to seamlessly incorporate it without disruption to building aesthetics. Powered by batteries, its smart wire-free simplicity makes it an ideal choice for any facility.

A range of options

The SMARTair platform has a range of solutions that address diverse security needs, which can all be integrated and deployed within the same system.

- **SMARTair Update-on-Card** — eliminating the need for time-consuming manual processes, the Updater quickly updates user cards which automatically transfer the new information to each door as the card is presented to it. Information from the doors to the manager is similarly transferred, just in the opposite direction.
- **SMARTair Offline** — a complete access control solution (including authorizations, time schedules, audit trails and more), that is easily mounted on existing mechanical door locks and controlled with user-friendly software and a portable programmer.
- **SMARTair Standalone** — requiring no software or encoder, programming is performed at the door itself with a designated programming card.
